

ALDERSON RADIATION THERAPY PHANTOM

The Alderson Radiation Therapy (ART) Phantom and its well-known earlier version have been in use for over 30 years. The ART Phantom has been refined and improved in both design and materials. These phantoms are indispensable quality-assurance tools with about 10,000 in use all over the world. They provide integrated tests of the entire chain of treatment planning and delivery.

ART Phantoms are molded of tissue-equivalent material. They are designed within highly sophisticated technological constraints for accuracy and for ease of use while adhering to ICRU-44 standards.

Repeatable. Durable. Necessary.

Radiology Support Devices, Inc., represents over 30 years of product innovation, development, and testing to deliver the finest human equivalent radiological subjects. As the original standard, our phantoms have proven to be consistent and reliable devices that endure the most rigorous use.

SIZE*	Male ART	Female ART
HEIGHT	175 cm 5 ft 9 in	155 cm 5 ft 1 in
WEIGHT	73.5 kg 162 lbs	50 kg 110 lbs

Linear Attenuation Data:

Monte Carlo simulation was used to calculate linear attenuation coefficients as a function of beam. Monte Carlo results were validated with linear attenuation coefficients derived from Hounsfield Unit measurements at discrete energy levels. RSD Phantom material linear attenuation data was compared to NIST data using ICRU Report 44 compositions of human tissues. NIST data was interpolated when necessary.
